

“Renato Ugo” scholarships for scientific research

Named in memory of Professor Renato Ugo, the scholarships, initiated by AIRI and generously supported by Fondazione Bracco and partners, is intended for talented undergraduates interested in pursuing research and innovation in chemistry and related sciences. In today's world, where innovation is the force that drives industrial progress, the STEM subjects (Science, Technology, Engineering, and Mathematics) have an ever more significant role to play. A STEM qualification gives its holder the essential skills to navigate the complexities and challenges of the modern world.

Launched in 2021 and renewed annually since the success of the first edition, which saw the participation of 170 students, the Renato Ugo Scholarships offer a concrete opportunity for undergraduate students to excel in their academic and professional careers.

The Renato Ugo Scholarships recall the unwavering commitment of Professor Renato Ugo, a distinguished professor of General and Inorganic Chemistry at the University of Milan and long-serving president of AIRI, to educating the next generation of scientists. The aim of the initiative is to encourage collaboration between the academic and professional worlds and to bring talented young STEM students into contact with companies at the forefront of industrial innovation.

For, as the Chair of the Bracco Foundation Diana Bracco put it, scientific research is the indispensable motive force behind the growth and development of a country. It is

therefore essential to oppose the prejudicial views that continue to limit the presence of women in the sciences, which is why we must promote greater gender diversity in STEM. The "Renato Ugo" scholarships are particularly careful to recognize the intellectual talents of female students, with the aim of narrowing the gender gap in the field of scientific and technological research.
